

Christian Drosten: his lies exposed.

Dr. Simon

Things have been quiet around Christian Drosten in recent months. For the most part, he withdrew from the public eye, or as I would say, the rats are deserting the sinking ship.

Now he gave a comprehensive interview to the German newspaper *Die ZEIT*, peppered with untruths. I have done the work to translate this interview in part and to document the extent to which Drosten lied.

The interview was conducted by Andreas Sentker and Jakob Simmank. The latter is known for his radical leftist views and his support of the Zero Covid Initiative. Accordingly, he cannot be considered a neutral journalist. Let's have a look at the interview that I translated using [deepl.com](https://www.deepl.com).

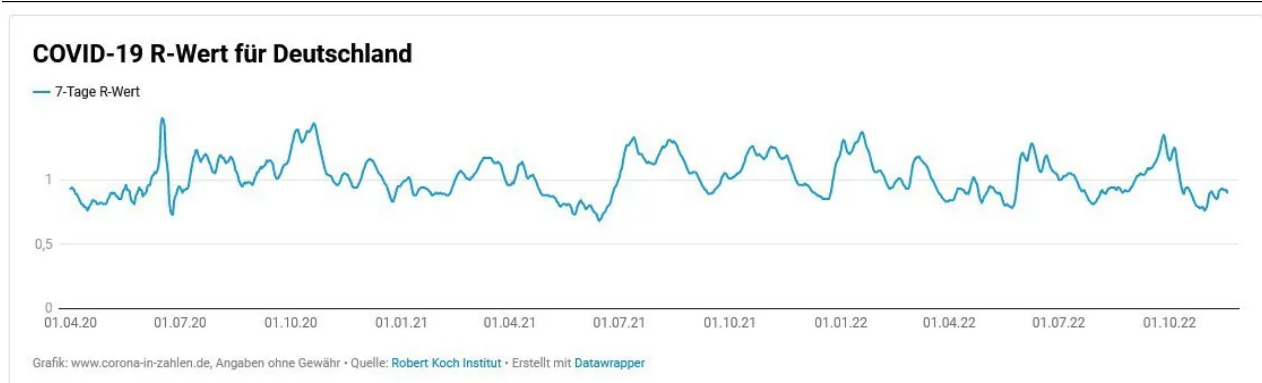

DIE ZEIT: Mr. Drosten, we have already experienced four corona waves this year, most recently in very rapid succession. Is this dynamic the new normal?

Christian Drosten: It is an indication of the coming end of the pandemic. The waves are more on the edge ...

ZEIT: ...and they break faster. Why?

Drosten: The R-value has dropped dramatically. It indicates how many people an infected person infects in average. Now, it is no longer above two, as it used to be, but around one - even without protective measures. Even small influencing factors such as a change in the weather are therefore enough to push or break a wave: In mid-September, it was cold and wet, and case numbers went up. In Mid-October we had a kind of late summer, immediately the numbers went down again. The situation for the virus becomes precarious. That's fortunate. It's no longer the case that the virus could completely turn the game around with a few mutations.

The interview already starts with a remarkable statement. Drosten claims that the R-value would already have been above 2. This is a blatant lie, as can be seen below.

ZEIT: When the vaccines entered the market, there was talk of efficacies of over 90 percent against infection. But then the vaccine protection quickly dwindled. How good were the vaccines really?

Drosten: Maybe people cheered a little too quickly during the approval trials, because no one was infected after three months. There was a lack of experience. And because more people have been infected since Omikron, the impression was given that the vaccines were not as effective. However, it must be clearly stated: Against severe infection and death, the vaccines provide absolute and lasting protection - even with Omikron. Omicron is not mild, that is a big misconception. It is not a less sick virus that has made the Omicron wave so much milder, but vaccination. We saw that in Hong Kong, where there were many, many deaths in an unprotected population in the Omicron BA.1 wave - you had to go in aggressively and stop that immediately. Therein lies the reason for the Chinese dilemma: Xi Jinping knows full well that he can't just let the virus go. First, the Chinese population must be vaccinated as well as we are.

This part is cheeky and gives a deep insight into Drosten's political attitude. All this we have always said, but it was always dismissed by Drosten as "PLURV/FLICC". In November 2021, Drosten even promised herd immunity with a vaccination rate of over 80%. Moreover, it is worrying how Drosten is pandering to the authoritarian Chinese regime. What is actually going on with Africa? Have they all already been vaccinated?

Regarding Africa, Drosten had warned of the consequences of an outbreak in Africa in an edition of the wok podcast "*fest und flauschig*." The pandemic could have a dramatic impact on countries with weak organizational structures and weak political institutions where there are major cities. "There we will see scenes in the period between June and August that we only know from blockbuster movies. There will be scenes that we can't imagine like this today. And I'm not sure what that will do to us," Drosten said. And again, he was entirely wrong.

ZEIT: The expert council you belong to still exists, though, doesn't it?

Drosten: But that is not where I would see the task. We work forward thinking and should focus on the next possible problem situation. I think a new committee would have to be formed to look back. And we would have to invest money, because that would require research and research capacities. By the way, it is not only epidemiologists and virologists who are needed, the latter perhaps even the least. After all, we are talking about the social impact of interventions and measures.

ZEIT: And if we want answers quickly now, where do we get them? How are we prepared for the next pandemic? How exactly do we know which measures were useful?

Drosten: Well, there are certainly more question marks. At the beginning of a pandemic with a respiratory virus, for example, we now know that masks are very useful. But over time, their efficiency, their contribution to protection, decreases. Quite simply because they are then just another component in addition to immunity.

Drosten has repeatedly said that he is a virologist and knows little about epidemiology (and obviously also immunity, as shown below). Yet, in almost every interview or tweet, he has called for further measures that have strangled and tortured the population.

How it started...

Christian Drosten 
@c_drosten

Anyone who believes that an infection trains their immune system must consequently also believe that they train their digestion with a steak.

SARS-CoV-2 Naturally Acquired Immunity vs. Vaccine-induced Immunity, Reinfections versus Breakthrough Infections: a Retrospective Cohort Study

Conclusions: Naturally acquired immunity confers stronger protection against infection and symptomatic disease caused by the Delta variant of SARS-CoV-2, compared to the BNT162b2 two-dose vaccine-induced immunity.

He was, for example, a follower of the Zero Covid cult and has advocated mandatory masks, which were, and still are, counterproductive from a health perspective.

On March 22, 2020, Christian Drosten claimed that "masks protect others in public." A month later, however, he told a political control committee that "a mask won't stop the virus." He knew exactly what he was doing. He knows exactly that he lied, and he's still pulling it off.

		
<i>Masks do not stop the virus. Technical data does not look good.</i>	<i>Simple masks reduce virus transmission #wearamask</i>	<i>There is no scientific evidence that masks work.</i>
RBB-Interview on 30/01/20	Statement on Twitter on 03/04/20	Parliamentary Hearing on 09/09/20

In 2014, Christian Drosten gave an interview with the German newspaper "Wirtschaftswoche" about coronaviruses. His statements could not be more contradictory. As can be seen below.

DROSTEN ON: VIRUS PREVENTION

The most effective measure is to often wash your hands. In the case of coronaviruses, water and soap are sufficient. Most cold viruses, coronaviruses are transmitted through direct contact, for instance when shaking hands. From the hands, the pathogens reach the mouth and nose, where they begin to multiply.

 **WirtschaftsWoche**

From a scientific point of view, it is absolutely necessary to quickly and drastically reduce the still significantly too high number of new infections by a hard lockdown. Social contacts should be reduced to a very narrow circle.

 **NDR-Podcast (8 Dec 20)**

DROSTEN ON: POSITIVIE CORONA-CASES

The PCR method is so sensitive that it can detect a single hereditary molecule of this virus. If, for example, such a pathogen flits across a nurse's nasal mucosa without her noticing anything else, then she is suddenly a Mers case. Where previously terminally ill people were reported, now mild cases and people who are actually perfectly healthy are suddenly included in the reporting statistics.

WirtschaftsWoche

We have to take shortcuts. If one person in a household tests positive, we could, for instance, consider the entire household to be positive, even without a test.

ZEIT (20 Mar 20)

DROSTEN ON: VIRUSES & BACTERIA

Our body is constantly being attacked by viruses and bacteria. However, they often fail at barriers such as the skin or the mucous membranes in the nose and throat. There, they are successfully warded off before they can do any harm.

WirtschaftsWoche

Everywhere

ZEIT: Are you at peace with yourself?

Drosten: For me personally, I can't draw a clear conclusion. I have missed opportunities that others have taken advantage of. At least I don't get any negative feedback from the scientific community.

ZEIT: Do you think you've made sufficient impact on the public?

Drosten: I've gotten through where someone has taken the time to listen to or read what I say, on the podcast or in big interviews like this one. Unfortunately, time and again statements of mine have been shortened, taken out of context and exaggerated to the point of falsification. But I hear from many people, including colleagues from abroad, that I have been able to provide orientation.

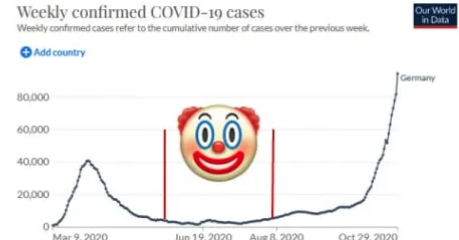

Drosten primarily spreads misinformation. As a virologist, he ridiculed seasonality, and even in January 2021, he stated, "I have dire fears about what might happen in the spring and summer".

09 Mar 2020

"The temperature effect on the virus will be relatively small. We must expect that a maximum of cases will occur in the period from June to August."

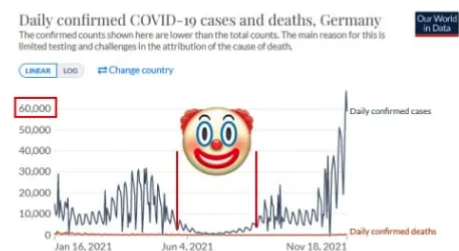

– Christian Drosten, *NDR Podcast*

22 Jan 2021

"I have terrible fears about what could happen in the spring and summer. Then, in the worst case, we will have cases of 100,000 per day."

– Christian Drosten, *Focus*

01 Mar 2022

"We are unlikely to make much headway with the current vaccination progress and have significant infection activity from Omicron. Therefore, I expect that there will not be an infection-free summer."

– Christian Drosten, *NDR Podcast*

<https://t.me/goddek>

Moreover, the problem is not that his statements are taken out of context but that he keeps contradicting himself. Moreover, he has called his colleagues from the Great Barrington Declaration *saboteurs* and *pseudo-experts* and publicly accused them of lying.

In the end, he was the liar - over and over again. This principle is called gaslighting, and it is punishable by law.

Drosten about Covid mutations "Later is too late"

19.01.2021 20:38 Uhr

Virologist Christian Drosten observes only a few infections with Covid mutations in Germany. At the moment, the spread can still be contained.

Christian Drosten wants to prevent the spread of mutations.

Quelle: dpa

It says everything about these two journalists who failed to ask a single critical question. This interview is pure PR and propaganda. Where were the questions about Drosten's PCR paper? Where were the questions about his (business) involvement in the first PCR tests? How much did he earn from it? Where were the critical questions about his contradictions and participation in the Fauci-Farrar conference calls?

This person is an intensive offender and is supported by influential people. Once Drosten falls and reveals his secrets, so does the narrative. His lies and actions are well documented. It is up to us to publicly pressure the judiciary to deal with this misanthrope.

NIE WIEDER! NEVER AGAIN!

Dr Simon, this is a excellent piece of work. Drosten and his "test" for SARS2 - without ANY infected material - has contributed to the deaths and severe complications of millions of men and women. He is truly evil.
