13. January 2026

The Honorable Donald J. Trump  
President of the United States of America  
c/o The White House  
1600 Pennsylvania Avenue NW  
Washington, DC 20500  
United States of America

**Ref: Urgent Switzerland WHO BioHub and Spiez Laboratory Dual Use and Gain of Function Risks**

Dear President Trump,

We are writing to you jointly as a Swiss citizen engaged in laboratory-analysis, environmental modifications, civic and democratic advocacy and as a senior German scientist with decades of experience in toxicology, immunology, and biological risk assessment, including dual use and gain of function related research.

This letter addresses an urgent and escalating international security concern centered in Switzerland, namely the operational integration of the World Health Organization with the Swiss federal high security laboratory in Spiez, and the associated WHO BioHub System.

Switzerland has become the central operational base of the WHO. This role now extends far beyond coordination and advisory functions and increasingly involves the handling, storage, transfer, and research of high risk pathogens. These activities include dual use capable research and gain of function relevant work, conducted under WHO frameworks and diplomatic immunities.

These programs were established and expanded without explicit democratic authorization by the Swiss Parliament and without a mandate from the Swiss population. In a direct democratic constitutional system such as Switzerland, this constitutes a profound legal and constitutional breach.

The WHO BioHub cooperation with the Spiez BSL 4 laboratory represents a convergence of global health governance, high risk biological research, and international political power,

Schweizerischer Verein WIR  
Association suisse WIR  
Associazione Svizzera WIR  
Swiss Association WIR

operating without transparent oversight, independent auditing, or meaningful parliamentary control. This creates not only national constitutional concerns, but global biosecurity risks.

As you yourself have publicly stated, time is running out to stop a potential lab leak scenario in Switzerland. You have correctly warned that the WHO leadership, under Dr. Tedros Adhanom Ghebreyesus, has failed to act transparently and has actively obstructed accountability regarding the origins of Covid 19, including by appointing conflicted actors to investigate the Wuhan laboratory. These same leadership failures now manifest in Switzerland.

<https://www.whitehouse.gov/lab-leak-true-origins-of-covid-19/>

We further draw attention to the fact that pandemic exercises, pathogen aggregation, and centralized bio clearing house functions are now being conducted under WHO authority on Swiss territory, shielded by diplomatic status. Every delay in restoring accountability increases the risk of another global catastrophe.

One of the undersigned, Prof. Dr. Stefan W. Hockertz, has been subject to sustained professional and political persecution following early public warnings about Covid related misconduct, the Wuhan lab leak hypothesis, and the dangers of unregulated dual use and gain of function research. His experience is directly relevant to the present situation and illustrates the broader pattern of suppression faced by scientists who raise legitimate safety concerns.

We hereby explicitly incorporate by reference Prof. Hockertz's detailed scientific and legal assessment, originally addressed to Dr. Robert Malone, concerning WHO misconduct, lab leak risks, and gain of function governance failures. That document forms an integral part of this appeal and is available for review and submission as an annex.

We respectfully request your attention and principled engagement to support:

1. Immediate independent international investigations into the WHO BioHub System and its cooperation with the Spiez laboratory
2. Full transparency regarding all dual use and gain of function related research conducted under WHO authority in Switzerland
3. Review of the legality and constitutional basis of WHO operations on Swiss territory
4. Restoration of democratic oversight, parliamentary control, and national sovereignty
5. Accountability of WHO leadership for past and ongoing obfuscation of laboratory origin risks

The possibility of a United States exit from the WHO in 2026 has already triggered global debate. Many now ask whether such a step could mark the beginning of a broader restoration of sovereignty, transparency, and lawful international cooperation.

Switzerland's neutrality, constitutional order, and public trust are being undermined by opaque international structures operating without democratic consent. Addressing this is not an act of confrontation, but a necessity for global safety.

Respectfully,

Christian Oesch  
President  
Schweizerischer Verein WIR

Prof. Dr. Stefan W. Hockertz  
Toxicologist and Immunologist
